

Salon Shizuka — Section Specification Sheet

PREMIUM UX & CONTENT STRATEGY DESIGN

Brand & Structural Architecture

1. Strategic Context & Placement

- **Viewport Position:** Section 04 (Positioned dynamically after the Work Gallery and immediately before the Price Matrix).
- **UX Rationale:** Establishes intimate human trust and personal vulnerability with the customer before asking them to process functional cost barriers.
- **Target Audience Alignment:** Specially tuned for midnight browsing behaviors—providing low cognitive strain, high emotional safety, and a calming visual atmosphere.

2. Layout & Responsive Breakpoints

- **Desktop Grid (Asymmetric 60/40):**
 - Left Pane (60%): Narrative copy blocks styled with editorial asymmetric whitespace. Generous alignment spacing.
 - Right Pane (40%): Fixed visual anchor. High-resolution branding portrait or organic, warm-toned close-up of the private salon interior.
- **Mobile Grid (Fluid 100%):** Automatically collapses into a single-column stacked layout. The visual anchor moves above the narrative title to anchor the viewport during quick-scroll interaction.

3. GSAP Animation Mechanics

- **Trigger Element:** #section-owner-introduction
- **ScrollTrigger Configuration:** start: "top 80%", toggleActions: "play none none reverse"
- **Visual Target Tweens:** Image element executes a smooth scale decay (scale: 1.05 to 1.0) combined with a delicate opacity fade (opacity: 0 to 1, duration: 1.2, ease: "power2.out").
- **Text Target Tweens:** Copy blocks leverage a staggered vertical reveal (y: 30 to 0, stagger: 0.2, duration: 0.8).

UI/UX Deployment Checklist

- [✓] **Font Stack Fallbacks Verification** — Ensure native fallback sequence is declared correctly in CSS modules to protect typography integrity on older mobile devices.
- [✓] **Semantic Structure Optimization** — Use native `<section>` scoping paired with correct structural headings (`<h2>` for subheaders, `<h3>` for primary messaging layout).
- [✓] **Asset Compression Setup** — Ensure the right-pane background profile asset is passed through WebP conversion pipelines at 85% quality encoding to protect page load speed.
- [✓] **Whitespace Padding Controls** — Enforce a strict minimum desktop separation of `margin-bottom: 120px` to maintain a relaxed luxury boutique rhythm.
